### Variety of opportunities open door for research

In just four years, Avery U. graduated with her bachelor's and master's degrees from the School of Life Sciences. While she knew early on that she wanted to study biology, finding a focus for her research took a little longer and it wasn't until she began work in associate professor Melissa Wilson's lab as a graduate student that she found her niche. Post-graduation, Avery plans to continue her research in Professor Wilson's lab, spending time studying sex-biased gene expression in brain tissue samples from Alzheimer's patients.
